

# virtual CLASSROOM

## VIRTUAL CLASSROOM

Our virtual classroom enables live presentation, interaction and rich video streaming to enable an optimal environment to learn. Full PowerPoint displays, chat messaging, polling and audio exchange brings the physical classroom right to your desktop.

It provides a unique opportunity to interface with your tutor enabling LIVE chat, video demonstration, full PowerPoint displays, web-tours and much more. With built-in knowledge checks, on-screen activities and case studies our learners remain fully engaged in their learning and as a consequence gain maximally from the experience.

## LIVE

By engaging with the presenters you can really get to grips with the content. LIVE seminars, courses and conference delivery provides direct access to great teachers and at affordable prices. Live education provides unequivocally the best way to learn and develop. You engage with people not content and this is what makes LIVE training and education online so special.

Our blend of recorded and LIVE training brings even more flexibility to your ongoing training and development and with real-time presentations and workshops you will truly be present even from the comfort of your own home.

## INTERACTION

Quality learning occurs when there is interaction. Without interaction whether a well designed DVD, workbook, text book or live class there is minimal learning. We learn by doing and seeing and the virtual classroom provides the perfect opportunity to interact from your own home.

There is no better way of learning than getting involved. Often we sit back and keep our burning questions to ourselves perhaps afraid whether our question is pertinent or will come out right. The virtual classroom helps learners fully engage in their learning allowing chat messaging, multi-choice polling, questions and answers and practical activities on-screen.

## RECORDED LIBRARIES

Recorded libraries offer a resource for self-paced study and are available for all our online students. Whether you require anatomy and physiology, communication or sales skills, functional training or sports conditioning refreshers our recorded libraries provide an easy to access resource. View a demo and choose a course!
